DETAILED ACTION

Claims 1-34 are pending in the application.

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-24, drawn to a method of identifying a preferred liver transplant donor by determining a polymorphic site that associated with a tumor necrosis factor, classified in class 536, subclass 24.3.
- II. Claims 25-34, drawn to a method for limiting the severity of recurrence of hepatitis C in a liver transplant recipient, classified in class 435, subclass 1.1.

The inventions are distinct, each from the other for following reasons.

The inventions of Groups I-II are patentably distinct because the inventions are drawn to methods that require different starting material and modes of operation. Each method requires distinct steps. Therefore, the inventions of Groups I-II are patentably distinct.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper. A search of the subject matter of one invention would not be co-extensive with a search of the other invention, and therefore the search would be burdensome. Each invention is capable of supporting a separate patent.
